

# What we're doing

[One-page summary · for press, partners, and neighbors](#)

**Stage: Pre-launch.** No money is being collected. No securities are being offered. Any future cooperative membership or fleet-backed note will be offered only through formal documents after the required Arkansas and federal filings. Every dollar, salary, percentage, partner name, and date in these materials is a target — planned and illustrative — unless explicitly noted otherwise.

## The pitch in one sentence

We're building the private-equity playbook for robotic services in Northwest Arkansas — and removing the greed. **Same machine. No greed.**

## Three pillars

- **RaaS** — Robotics-as-a-Service. Mowing first; pools, delivery, robotaxi next.
- **HaaS** — Hardware-as-a-Service. Fleet leased to operators; refundable Core Charge keeps units in the loop.
- **SaaS** — Software-as-a-Service. Dispatch, ledger, vetted-tech panel, and civic intel.

## Who owns the upside

A planned multi-stakeholder cooperative — Class A patrons, Class B workers, Class C community — one member, one vote within class. Surplus returns as Allocated Patronage Equity under Subchapter T. No tokens. No P2P fiat. Cash redemptions only by board declaration.

## The endgame

Urban Recovery Mining of lithium, cobalt, and nickel from the end-of-life packs the cooperative already operates — refined locally on adaptive-reuse poultry-house sites, owned by the members who use the services.

## Where we are today

- Public operating platform, knowledge base, and waitlist are live.
- Internal patronage ledger, COI tracker, and admin console are built.
- Insurance, bylaws, and PPM drafts are written and counsel-bracketed — not adopted, not filed.
- No money is being collected. No securities are being offered.
